Nursing Process as a Supervision Model

Muhammad Rehan
What is Process

- It is a series of action.
The nursing process is a variation of scientific reasoning that allows nurses to organize and systematize nursing practice.
Steps of nursing process

- Assessment
- Diagnosis
- Planning
- Implementation
- Evaluation
THE NURSING PROCESS

ASSESSING
GATHER DATA.

ANALYZING
I.D. PROBLEM. FORMULATE NURSING DIAGNOSIS.

PLANNING
WRITE CARE PLAN TO MEET GOALS

IMPLEMENTING
CARRY OUT PLAN.

EVALUATING
COLLECT OBJECTIVE DATA TO DETERMINE THE EXTENT TO WHICH GOALS WERE ACHIEVED. REVISE PLAN AS NEEDED.
ASSESSMENT

- Is the first step includes collection, verification, organization, interpretation, and documentation of data.
Assessment Steps

- Collecting data from variety of source
- Validating the data
- Organizing data
- Categorizes & identifying patterns in the data
- Making intitial inferences or impression
- Recording & reporting
Diagnose

- The second step involves further analysis (breaking the whole down into parts that can be examined) and synthesis (putting data together in new ways) of the data that have been collected.
Source of Diagnostic Error

Errors can occur in the nursing Diagnostic process during:

- Data collection
- Data clustering
- Interpretation and analysis of data
- Diagnostic statement
PLANNING

- Is the third step includes the formulation of guidelines that establish the proposed course of action in the resolution of diagnosis and the development of plan.
Planning Tasks

- Prioritized list of problems
- Goals & outcomes are identifies
- Specific intervention are developed
Establishing Priorities

Priorities setting involves ranking diagnoses in order of importance. Priorities are established to help the nurses anticipate and sequence interventions when multiple problems.

(Carpenito, 1997)
Classification of priorities

- High Priorities
- Intermediate Priorities
- Low Priorities
Implementation

In this step we carrying out plan.
Evaluation

The final step, is crucial to determine whether, after application of the model, the sanitation or well being improves.
# Comparison of Model and Nursing process
